## NORMAL DEVELOPMENT: 3 YEARS OLD

### Physical Development

- Jumps, gallops, tiptoes, and runs smoothly.
- Can walk backwards a long distance.
- May stumble and fall often.
- Rides a tricycle.
- Can pour from a pitcher or milk carton using both hands.
- Undresses self, but needs help with dressing.
- Uses crayons.

### Emotional Development

- Becomes more relaxed and flexible.
- Cries and hits at times.
- Quickly switches from shyness to high spirits and back.
- May show fear of unfamiliar objects or activities.
- May want to be a baby at times.
- Starts to talk about dreams.

### Social Development

- Is keenly interested in family activities.
- Sees parents as heroes.
- Seeks approval from adults.
- Tests limits constantly.
- Often prefers to play alone.
- May have an imaginary playmate.
- Shares and takes turns occasionally.
- Quarrels with other children.

### Mental Development

- Develops a somewhat stable concept of self.
- Speaks about 1,000 words.
- Starts to use pronouns in speech.
- Loves to hear stories over and over again.
- Enjoys learning short rhymes and songs.
- May match or identify primary colors.
- Enjoys imaginative and imitative play.
- Can take on some very simple responsibilities.
- Puts toys away with adult help.
- Has attention span of no more than a few minutes.
- Can make choices.

Each child is unique. It is difficult to describe exactly what should be expected at each stage of a child's development. While certain behaviors and physical milestones tend to occur at certain ages, a wide range of growth and behavior for each age is normal. These guidelines show general progress through the developmental stages rather than fixed requirements for normal development at specific ages. It is perfectly natural for a child to reach some milestones earlier and other milestones later than the general trend.

If you have any concerns about your child's own pattern of development, check with your healthcare provider.

# Well Child Care at 3 Years

## Nutrition

Mealtime should be a pleasant time for the family. Your child should be feeding himself completely on his own now. Buy and serve healthy foods and limit junk foods. Your child will still have a daily snack. Choose and eat healthy snacks such as cheese, fruit, or yogurt. Televisions should never be on during mealtime. If you are having problems at mealtime, ask your healthcare provider for advice.

## Development

Children at this age often want to do things by themselves; this is normal. Patience and encouragement will help 3-year-olds develop new skills and build self-confidence. Many children still require diapers during the day or night. Avoid putting too many demands on the child or shaming him about wearing diapers. Let your child know how proud and happy you are as toilet training progresses.

## Behavior Control

For behaviors that you would like to encourage in your child, try to “catch your child being good.” That is, tell your child how proud you are when he does what you want him to do. Be positive and enthusiastic when your child does things to please you.

Here are some good methods for helping children learn about rules:

- Divert and substitute. If a child is playing with something you don't want him to have, replace it with another object or toy that the child enjoys. This approach avoids a fight and does not place children in a situation where they'll say “no.”
- Teach and lead. Have as few rules as necessary and enforce them. These rules should be rules important for the child's safety. If a rule is broken, after a short, clear, and gentle explanation, immediately find a place for your child to sit alone for 3 minutes. It is very important that a “time-out” comes immediately after a rule is broken. Time-outs can serve as an excellent tool to teach a child a rule. Time outs require skill and careful planning. If you use time-out, be sure to read about the technique before using it.
- Make consequences as logical as possible. For example, if you don't stay in your car seat, the car doesn't go. If you throw your food, you don't get any more and may be hungry.
- Be consistent with discipline. Remember that encouragement and praise are more likely to motivate a young child than threats and fear. Do not threaten a consequence that you do not carry out. If you say there is a consequence for misbehavior and the child misbehaves, carry through with the consequence gently, but firmly.

## Reading and Electronic Media

Children learn reading skills while watching you read. They start to figure out that printed symbols have certain meanings. Young children love to participate directly with you and the book. They like to open flaps, ask questions, and make comments. It is important to set rules about television watching. Limit total TV time to no more than 1 to 2 hours per day. Do not have a TV or DVD player in your child's bedroom.

## Dental Care

- Brushing teeth regularly after meals is important. Think up a game and make brushing fun.
- Make an appointment for your child to see the dentist.

## Safety Tips

Child-proof the home. Go through every room in your house and remove anything that is either valuable, dangerous, or messy. Preventive child-proofing will stop many possible discipline problems. Don't expect a child not to get into things just because you say no.

## Fires and Burns

- Practice a fire escape plan.
- Check smoke detectors. Replace the batteries if necessary.
- Keep matches and lighters out of reach.
- Turn your water heater down to 120°F (50°C).

## Falls

- Do not allow your child to climb on ladders, chairs, or cabinets.
- Make sure windows are closed or have screens that cannot be pushed out.

## Car Safety

- Never leave your child alone in a car.
- Everyone in a car must always wear seat belts. Make sure your child is always in an appropriate booster seat or car seat.

## Pedestrian and Tricycle Safety

- Hold onto your child's hand when you are near traffic.
- Practice crossing the street. Make sure your child stays right with you.
- Do not allow riding of a tricycle or other riding toys on driveways or near traffic.
- All family members should use a bicycle helmet, even when riding a tricycle.

## Water Safety

- Watch your child constantly when he is around any water.

## Poisoning

- Keep all medicines, vitamins, cleaning fluids, and other chemicals locked away.
- Put the poison center number on all phones.
- Buy medicines in containers with safety caps.
- Do not put anything that could be poisonous into drink bottles, glasses, or jars.

## Strangers

- Teach your child the first and last names of family members.
- Teach your child never to go anywhere with a stranger.

## Smoking

- Children who live in a house where someone smokes have more respiratory infections. Their symptoms are also more severe and last longer than those of children who live in a smoke-free home.
- If you smoke, set a quit date and stop. Set a good example for your child. If you cannot quit, do NOT smoke in the house or near children.

## Immunizations

Routine vaccinations are usually completed before this age. Before starting kindergarten your child will need vaccinations. Children should receive an annual flu shot. Ask your doctor if you have any questions about whether your child needs any vaccines.

## Next Visit

The American Academy of Pediatrics recommends that your child have a routine checkup every year. Be sure to bring your child's shot records to every annual visit.
